TECHNICAL SKILLS

AI & LLM Engineering: LangGraph, CrewAI, Agno(Phidata), LangChain, RAG, Transformers, Prompt Engineering
LLM Providers & APIs: OpenAI, Anthropic, Groq, Hugging Face
Programming Languages: Python, SQL, Rust, C++
ML & Data Science: Scikit-learn, XGBoost, TensorFlow, PyTorch, Pandas, NumPy
Vector Stores & Databases: ChromaDB, Pinecone, MySQL, SQLite
Backend: FastAPI, Flask, Streamlit
Tools & Infrastructure: Git, GitHub Actions (CI/CD), Docker, AWS (S3, EC2)
Concepts: Machine Learning, Deep Learning, Natural Language Processing (NLP), Generative AI, Agentic AI, Feature Engineering, Statistical Analysis, A/B Testing

EXPERIENCE

Metalinked — UC Berkeley-founded, VC-backed AI platform for manufacturing operations — United States (Remote)
AI Engineer — Jan 2026 – Present

- Architected a **10-agent orchestration platform** using **LangGraph**, **LangChain**, and **FastAPI**, with a supervisor-router pattern that dynamically dispatches to **parallel subgraphs** (open-market + internal) and fan-out/fan-in execution, powering AI-driven **quoting**, **sourcing**, and **procurement** workflows across enterprise manufacturing customers.
- Designed **multi-agent pipelines** with tool-calling LLMs (GPT-4o, Claude, Gemini) and **MCP (Model Context Protocol)** integrations to 9+ external data sources (DigiKey, Mouser, Nexar, OEM Secrets) for real-time **BOM analysis**, **RFQ generation**, and **supplier evaluation**, reducing manual sourcing effort by automating end-to-end procurement cycles.
- Built a **RAG retrieval layer** combining **pgvector/Qdrant** vector similarity search with structured ERP queries and **GPT-4o Vision OCR** for document ingestion (PDF, CAD drawings, spreadsheets), enabling agents to reason over tribal knowledge, legacy drawings, and live inventory **with citation-grounded** responses.
- Developed **ML-powered prediction agents** for **inventory risk scoring** (multi-target XGBoost: stockout, demand volatility, supply chain, imbalance) and **supplier delivery delay prediction**, integrating model microservices via REST APIs with TTL-based caching.
- Shipped **production guardrails and evaluation harnesses** including Pydantic schema enforcement, structured output validation, retry policies, rate limiting, and a CI/CD pipeline (Black, Pylint, MyPy, Bandit, pytest) with **unit and integration test suites** to ensure agent reliability before promotion to production.
- Engineered a **real-time WebSocket streaming API** with Redis/SQLite-backed session persistence, conversation compaction (checkpoint views), and **Datadog/OpenTelemetry tracing** for observability across the full agent execution graph.

Stealth AI Startup — Venture-backed AI infrastructure startup (persistent memory for agents) — United States (Remote)
AI Intern — Sep 2025 - Nov 2025

- Interned at an early-stage AI infrastructure startup building **persistent memory and context engines** for autonomous agents.
- Developed **technical demo materials** and product narrative content to communicate core platform capabilities to external audiences.
- Gained exposure to a production stack spanning **Rust services, Kubernetes**, and custom **vector/graph databases** used for agent memory.

PROJECTS

Drift AI GitHub | Live Demo

- Built a **multi-agent travel planner** using **LangGraph** and **Google Gemini**, orchestrating 5 AI agents (Flight, Hotel, Weather, Budget, Itinerary) via a **Supervisor agent** with dynamic conditional routing and typed state management
- Integrated **3 MCP Protocol servers** - Tavily (Streamable HTTP), AviationStack (stdio), and a **custom-built OpenWeather MCP server** — with async client layer, lazy initialization, and graceful error fallback handling
- Implemented **LLM-powered input guardrails** with structured JSON validation and a **Human-in-the-Loop** approval workflow using LangGraph's interrupt mechanism, enabling users to review, approve, or revise draft itineraries
- Enabled **persistent conversations** via **PostgreSQL** checkpointing and built a **FastAPI** web interface with PDF export

End To End Food Delivery Time Prediction GitHub | Live Demo

- Built and deployed an **XGBoost regressor** to predict food delivery ETAs, targeted at dispatcher-side logistics decisions.
- Performed full **data cleaning and feature engineering** (outliers, missing values, multicollinearity); benchmarked Linear Regression, Decision Trees, and Random Forest as baselines.
- Tuned the final XGBoost model to **R^2 0.82, RMSE 3.98** on held-out test data and served it via a Streamlit web app for real-time predictions.

EDUCATION

B.Tech, Computer Science & Eng. (Sandip University, Nashik) | CGPA: 8.3/10 | 2022-2025
Diploma, Computer Technology (MVPS's RSM Polytechnic) | Score: 82% | 2020-2022
